Dear Cobalt Freight hiring team,

I am applying for the Site Reliability Engineer role. At Northwind Payments I rebuilt the settlement pipeline as an event-driven service in Go and moved our cron jobs to a queue-backed scheduler with idempotent retries. Your posting asks for Observability, PostgreSQL, Machine Learning; that is the work I have been doing for the last three years.

I would like to talk about how Cobalt Freight keeps its services quiet on call.

Regards,
Alex Rivera
